## **Drive-in racking systems and high-density pallet storage**

### **SP80 Drive-in racking**

- Designed around SP80 pallet racking, SP80 Drive-in utilises a bespoke range of additional parts in conjunction with SP80 racking uprights and bracing, in a simple bolted construction.
- The specially formed beam rail serves as the pallet guide and also as the pallet storage rail, thereby keeping the number of different components to a minimum, while the integral floor-mounted truck guide rail is provided complete with a custom-made upright protector.
- Access to pallets is possible from either end of the rack, providing drive-through as well as drive-in capability.

### **Details that count**

- Manufacturing quality and lead time consistency are guaranteed.
- Both Drive-in systems are available in a choice of two beam rail sizes which can accommodate standard-sized pallets or pallets with overhanging loads.
- The integral truck guide-rail system is offered in two duties, to suit the type of operation and the design of truck being used.

## High-bay drive-in racking

The **High-Bay Drive-in** system is ideal when vertical height is able to be exploited. It can be supplied and loaded up to 12 metres high, by virtue of its bespoke 'I' section upright and tie bracing arrangement.

**High-Bay Drive-in** uses the same specially-formed beam rail as SP80 Drive-in, which can be used both as the pallet guide and as the pallet storage rail.

As with **SP80 Drive-in**, pallets can be accessed from either end of the rack, to provide Drive-through as well as Drive-in capability.

For '**first-in, last-out**' storage applications, the density of storage achieved with Drive-in racking systems and the consequent reduction of the floor area required can produce significant savings on associated running costs (eg heating, lighting, rent and rates).

## Fully tested to meet all standards

- Thus ensuring that our **Drive-in racking** systems are manufactured to the highest standards and continue to meet both UK and European design requirements.

## Range of products available... and more

- SP80 can be used in its own right to provide tailor-made racking solutions, and can also provide a framework for other methods of pallet storage, including Drive-In, Push Back Rack, Dynamic and Mobile Storage Systems.
- Cantilever racking is the ideal product when long lengths need to be stored.
- IM50 is one of Europe's favourite bolt-free hand-loaded shelving systems. A range of accessories adds to this popular product's versatility and makes it a logical choice for many industrial and semi-commercial applications.
- Slotted Angles are still faithful to the original Dexion designs and, used in conjunction with the normal range of accessories, remain as flexible in their applications today as they have always been.
