

The complete range of **BARRIER PRODUCTS**

« PEDESTRIAN BARRIER

For designation and protection of internal or external pedestrian walkways

TRAFFIC BARRIER »

For definition and segregation of vehicle traffic ways. Providing protection for machinery, equipment, materials and buildings.

« TRAFFICPLUS BARRIER

A combination barrier providing high low level vehicle impact protection with the height required for protection of personnel and pedestrians. Ideal for use in areas where heavy traffic frequency is high.

RACK END BARRIER »

For protection of standard racking systems from traffic impact in warehouses and distribution centres. The barrier installs with no direct physical contact or connection with the racking it protects.

The complete range of **BARRIER PRODUCTS**

« GUARDRAIL SYSTEM

For use where a simple physical barrier is required for segregation, access prevention, guarding machinery or equipment or for fall and edge hazard protection. Lightweight and durable.

« MICRO BARRIER

With an overall height of 260mm, used for protection of equipment and structures in retail storage areas and corridors in supermarkets, warehouses and hospitals. Ideal for use where material or equipment movement is undertaken using manually operated devices.

FREE STANDING VERSIONS

of the Guardrail system and the Pedestrian and Traffic Barriers are available as options. These options are not designed or intended to provide any significant protection but to allow use in situations where a temporary or moveable barrier obstruction is needed.

All safety barrier products are manufactured from polypropylene and utilise steel base plates for anchoring. Recommended floor fixing bolts are supplied with all products. The products provide inherent flexibility on impact and are assembled without screws, nuts bolts or welding using a unique interlocking system (Pat. App. PCT/GB03/000036). Products suitable for internal or external use without rusting or rotting whilst requiring minimal maintenance with low repair/replacements costs.

All products are designed and developed to comply with relevant safety standards and regulations
