

Pedestrian Barrier **ACCESS GATES**

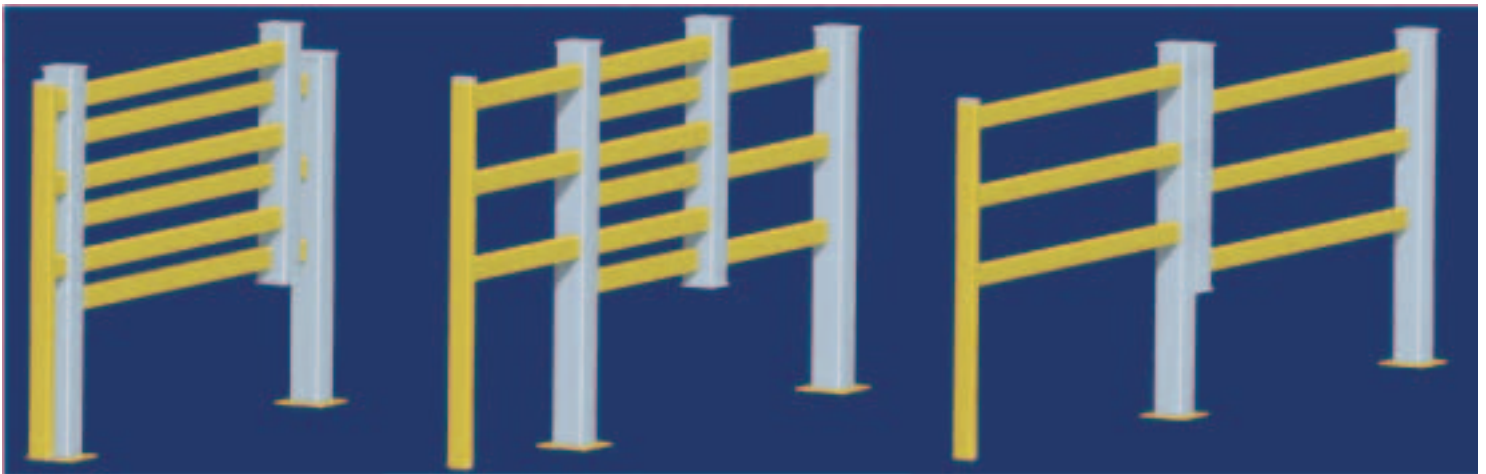

Swing Gates

Swing access gates are available to allow access where it is not desirable to simply leave a gap in a barrier run. The gates are fitted to barrier posts using a high quality self-closing double action hinge mechanism allowing access from either direction. The gates can be supplied to be lockable when in a closed position and are ideal for use in situations where regular personnel or irregular mechanical/ materials access is required.

Sliding Gates

Where gaps in a barrier are not desirable for access and using a swing gate would present an obstruction when a gate or gates are in an open position, sliding access gates are an ideal solution. The gates slide on a standard section of Pedestrian 3 rail Barrier and the gate and barrier section are supplied as a pre-assembled unit. This type of gate is ideally suitable in areas such as loading bays or enclosures where a swing gate would present an obstruction to traffic movement or be inconvenient for traffic access

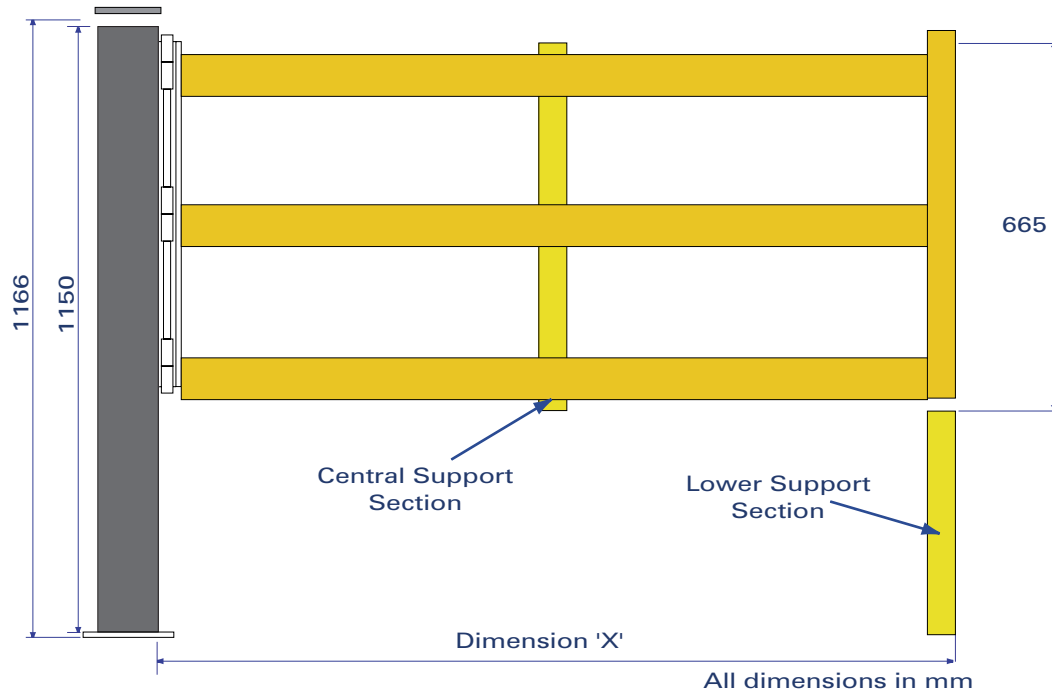

Both swing and sliding gates are available to give standard openings of 1000mm, 1500mm or 2000mm. The gates can be supplied as single units or in pairs to give 2000mm, 3000mm or 4000mm openings. Gate sizes can be mixed and matched to give any combination of the standard openings as required. Both types of gates can be optionally fitted with locking mechanisms so the gates may be secured in the closed position.

**THERE IS NO
SPACE TOO BIG
TOO SMALL
OR TOO
AWKWARD!**

CONSTRUCTION DETAILS

Swing Gates

Swing gates are fitted with a double action zinc plated mild steel (ISO9001.2000) hinge for swing opening in two directions and are designed to be self closing and to fit all existing standard IntaLockBarrier% systems. A closing/locking mechanism is optionally available, please contact us for details.

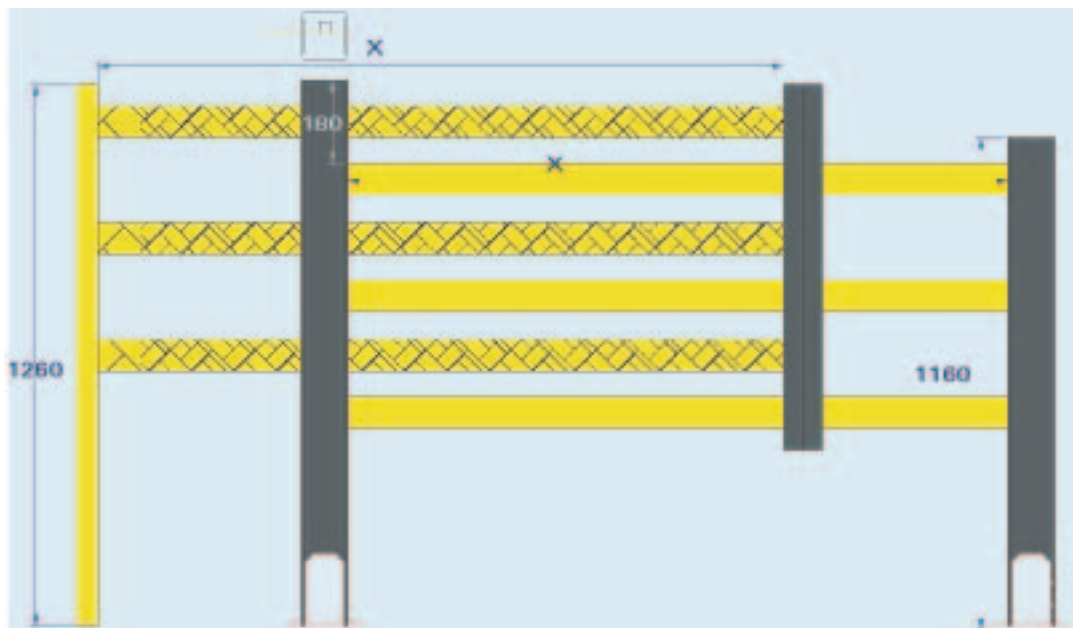

Dimension 'X' represents available access gate widths. Gates are available in standard widths of 1000, 1500 and 2000mm.

Note: The lower and central support sections indicated are 75 x 50mm section and supplied only on the 1500mm or longer gates. The lower support section is fitted with a nylon wheel to facilitate opening.

Sliding Gates

Dimension X for a 1000mm gate = 1110mm,
for a 1500mm gate = 1610mm
and for a 2000mm gate = 2110mm.
