

## TrafficPlus **BARRIER**

- ✓ **Simple installation**
- ✓ **Low Maintenance**
- ✓ **Easily repairable**
- ✓ **Long Lifetime**
- ✓ **Robust & Durable**
- ✓ **No Painting**
- ✓ **No Rusting or Rotting**
- ✓ **No screws or welding needed for assembly**

TrafficPlus is a combination barrier designed to provide enhanced low level vehicle impact protection whilst retaining the barrier height needed for protection of personnel and pedestrians. TrafficPlus brings together and improves on the performance and properties of the proven and successful IntaLock® Pedestrian and Traffic barriers whilst retaining their significant benefits of low cost installation and minimising maintenance and repair/replacement costs.

Using the same unique interlocking device (Pat. App. PCT/GB03/000036) used in other products in the IntaLockBarrier® range once the barrier post bases have been anchored TrafficPlus barrier is easily assembled without the use of nuts, bolts, screws or welding.

Manufactured from extruded polypropylene, TrafficPlus is impervious to most environmental conditions and is suitable for internal and external use. All necessary manufacturers recommended post

post floor fixing bolts to ensure maximum integrity of the barrier installation are included as standard. When correctly installed in sound concrete the fixings provide 90° shear loads of up to 9.8kN.

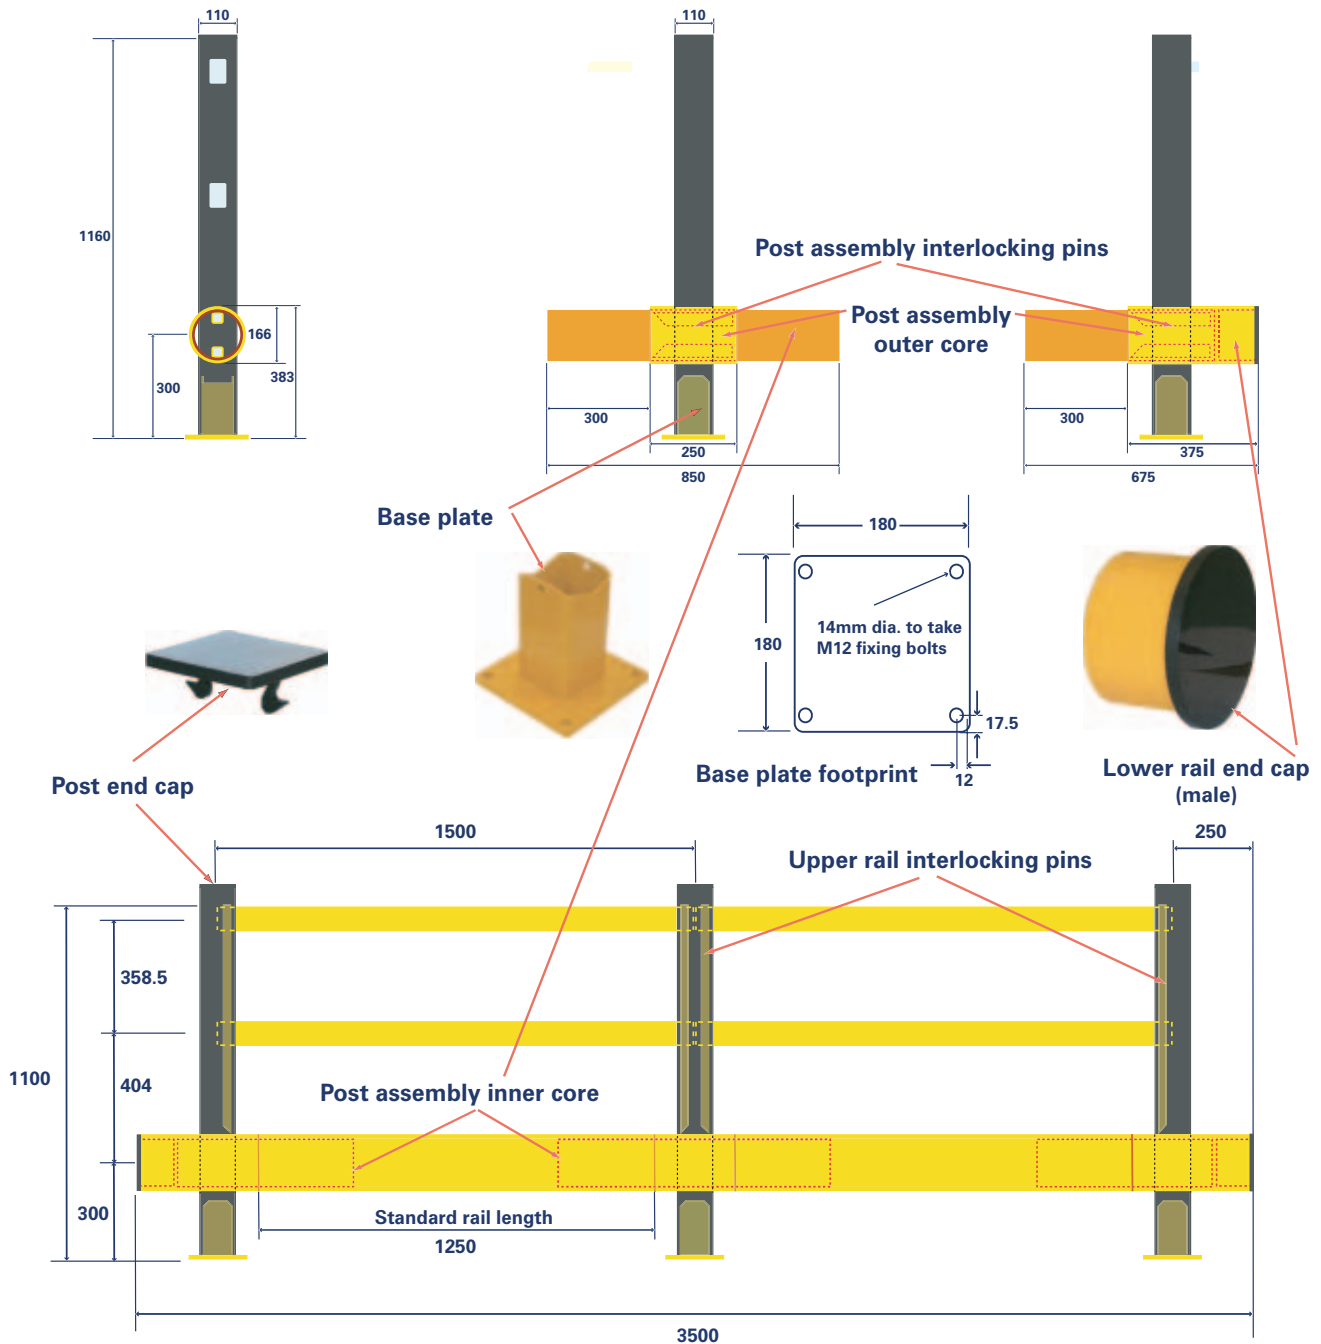

TrafficPlus is ideally suited for use in situations where personnel, pedestrians, equipment or structures are in close proximity to frequently or heavily used fork lift or vehicle traffic routes.

*TrafficPlus has been designed and developed to comply with relevant safety standards and regulations*

SPACE TOO BIG  
TOO SMALL  
OR TOO  
AWKWARD!**

# ASSEMBLY and DIMENSIONS (All dimensions given in mm)

Dimensions shown are for standard post assemblies and a standard 3500mm barrier section. Rails are supplied in sets of 3 (one lower and two upper) and the rail set length is determined by the length of the lower rail. The standard rail set is 1250mm but short, 600 - 1249mm, and long, 1251 - 1750mm rail sets are available to provide a barrier to a required length. The shortest length available is 1350mm.

All post sections are 110 x 110mm, upper rail sections are 75 x 50mm and lower rail section is 166mm OD.
