## Car Park Barrier

**In a car park even a small bump with the perimeter structure can lead to expensive vehicle body and structure repairs. Even worse, in multi-storey car park upper levels a vehicle could be driven off an edge.**

A-Safe Car Park Barrier is the perfect way to avoid unnecessary damage to both vehicles and structures. It will protect perimeter fencing or walls and its inherent flexibility and impact absorption properties ensures any vehicle hitting it will suffer little or no damage.

It can be used as a barrier to define and segregate a car park perimeter. The 445mm impact height centre and the optionally available anti-climb attachment make the barrier fully compliant with current car park regulations.

**THERE IS NO  
SPACE TOO BIG  
TOO SMALL  
OR TOO  
AWKWARD!**

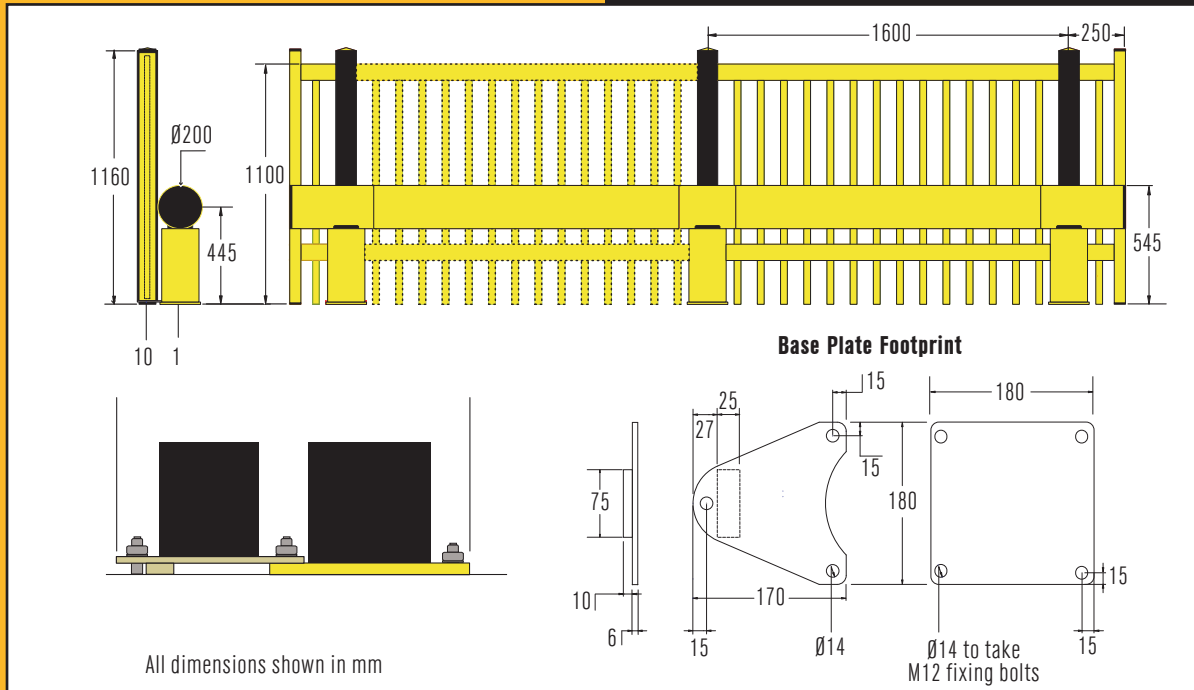

info@racking-uk.com [www.racking-uk.com](http://www.racking-uk.com)

The anti-climb attachment is supplied as pre-assembled panels for fitting into the attachment posts. Where two barrier sections are butted together at 90° corner anti-climb units are available.

**The anti-climb attachment should always be mounted on the non-traffic side of the car park barrier to which it is fitted.**

#### CAR PARK BARRIER DIMENSIONS

MAKE SURE YOU ARE COMPLIANT WITH  
HSC WORKPLACE REGULATIONS 1992 AND  
EC WORKPLACE DIRECTIVE 89/654/EEC

- Ideal for car park perimeter structures and for edge protection in multi-storey car parks
  - High impact absorption properties
  - Assembly from standard modular components
  - Supplied with post floor fixings
  - Internal or external usage
  - Tested and certified to British Standards
  - Strong, durable and flexible
  - Aesthetically pleasing
  - Highly visible
  - Easy to install
  - No screws or welding required
  - No painting
  - Little or no maintenance
  - Simple to repair
  - Reusable
  - Competitively priced
- Patent pending
