small or too awkward!*

## SP80 Adjustable Pallet Racking

### Product overview

With a pedigree born out of an initial 25 years under licence to Dexion Ltd and more than 40 years overall, SP80's design remains 100% backwardly-compatible with Dexion Speedlock® for spares, repairs and add-ons and is also the perfect choice for new installations.

**SP80** racking provides efficient storage for pallets of all types and sizes, in both static and dynamic applications. With a full range of accessories available, **SP80** is also ideally suited to the storage of bulk loads and irregular-shaped items that can't be palletised. It can be used with all designs and makes of fork lift trucks and mechanical handling equipment.

### Design

**SP80** is designed with safety in mind. Technical advice is always available from designers our office and from the product engineers in our factory.

With a full range of upright duties and beam sections available and a wide range of accessories, every job can be designed to provide exactly the right solution.

Storage & Workplace Equipment

## Details that count

Because **SP80** is guaranteed to be fully interchangeable with Dexion Speedlock® components, it is straight-forward to carry out repairs and extensions within existing Dexion installations without compromising quality or performance.

For new projects, **SP80** provides everything that you would expect of a product that is manufactured in a modern factory using automated and semi-automated processes.

The standard **SP80** beam end connector and spring-style safety lock both comply with SEMA and are fully compatible with Dexion Speedlock®. However, the system can also be supplied to FEM standards if required.

# SP80 Adjustable Pallet Racking

## Adjustable pallet racking at a Glance

- Selectivity 100% - all pallets are individually supported in racking
- Safety of Goods - Very good
- Throughput Speeds - High
- Stock rotation - Easily achieved
- Space Utilisation - 40%
- Aisle Width from: 2.7m
- Handling Equipment - Standard

## Accessories

- Mesh Shelves
- Pallet Support Bars
- Pull-out Unit
- Galvanised Shelves
- Skid Support Bar
- Drum Cradle
- Galvanised Shelves
- Skid Support Bar
- Drum Cradle

## Mobile Racking

**SP80** racking used in conjunction with mobile bases maximises savings by minimising the amount of 'dead' space that is usually lost to providing operator aisles. Sometimes, so much space can be saved that additional economies are gained through lighting and temperature-control cost reductions.

## Push Back Racking

**SP80** racking makes the perfect framework for this efficient solution for high-density, short-term storage. Loaded and unloaded from the same face, pallets are stored up to 4 deep on nesting wheeled trolleys. They are literally 'pushed back' into the rack by the next pallet as it is offered up. As the front pallet is withdrawn, the remaining pallets move forward on their trolleys so that the next one is at the pick face.

## Flowtrack

First-in, first-out dense live storage, which lends itself ideally to **SP80** for its framework. Pallets loaded in at one face travel forward under gravity, with their speed controlled by brakes within the system. The pallets come to a controlled halt for picking at the off-load face.
